

Yadkin Project Shoreline Management Plan (FERC No. 2197) Appendix G: Shoreline Stewardship Policy

I. General

The Yadkin Project (Project) includes four reservoirs: High Rock, Tuckertown, Narrows (Badin Lake), and Falls. The Project is owned by Cube Yadkin Generation LLC (Cube Yadkin) and licensed by the Federal Energy Regulatory Commission (FERC) as Project No. 2197. Cube Yadkin operates and manages the Project reservoirs in accordance with the terms of the Project license and the applicable rules and regulations of FERC. This responsibility includes providing adequate public access and public recreation facilities, and protecting important natural, environmental, cultural, and scenic resources. Cube Yadkin takes this responsibility very seriously and is committed to the protection and enhancement of these resources within the FERC-licensed Project boundary (Project boundary).

Generally, the Project boundary follows the normal full-pool elevation of the four Project reservoirs. Any land or waters lying within the Project boundary are regulated by FERC through the terms of the Project license and are covered under the Shoreline Management Plan and this Policy. Project property managed by Cube Yadkin includes the land below waters of the reservoirs and the generating facilities.

This Shoreline Stewardship Policy summarizes Cube Yadkin's policies, procedures, and requirements regarding use of the Project lands and waters. This Policy also outlines voluntary measures adjoining property owners can undertake to assist in caring for the reservoirs.

Cube Yadkin provides public access to Project lands and waters for purposes of navigation and recreation, including fishing and hunting. All other uses of the Project lands and waters including the development of private access, subdivision access, multi-use recreation facilities (marinas, boat docks, fishing piers, boat launches, water ski courses, inflatable recreation equipment, etc.), and industrial uses or facilities, require Cube Yadkin's written permission. This Policy identifies the procedures that must be followed by private individuals or developers seeking Cube Yadkin's permission to use or occupy Project lands and waters.

Any unauthorized use of, or change in the features or vegetation on, Project lands and waters is prohibited and considered an encroachment. Such unauthorized activities include, but are not limited to, the following:

- construction, installation, or placement of structures, including retaining walls;
- construction of boat ramps, roads, sidewalks, or pathways;
- clearing or disturbance of land;
- logging or removal of trees and vegetation;
- installation of pipes and/or pumps;

Yadkin Project Shoreline Stewardship Policy

- dumping (see XIII).

All landowners are responsible for knowing and respecting the boundaries of their own property. Cube Yadkin encourages adjoining property owners to undertake a survey of their property before embarking on any construction, road building, or land clearing activities on their property. Once a survey is done, Cube Yadkin requests that the adjoining property owner notify Cube Yadkin of the survey. Anyone with questions about property boundaries or surveying is encouraged to contact Cube Yadkin at 704-422-5555.

Under the Project license, Cube Yadkin has the authority to grant permission for certain types of use and occupancy of Project lands and waters and to convey certain interests in Project lands and waters. However, this can be done only if the proposed use and occupancy is consistent with the purposes of protecting and enhancing the scenic, recreational, and other environmental values of the Project. For those purposes, Cube Yadkin has the continuing responsibility to supervise and control the uses and occupancies for which it grants permission, and to monitor the use of, and ensure compliance with, the covenants of the instrument of conveyance for any interests that it has conveyed under the Project license. If a permitted use or occupancy violates any condition of the Project license or any other condition imposed by Cube Yadkin for the protection and enhancement of the Project's scenic, recreational, or other environmental values, or if a covenant of a conveyance made under the authority of the license is violated, Cube Yadkin will take any lawful action necessary to correct the violation. For a permitted use or occupancy, that action includes, if necessary, (i) canceling permission to use and occupy Project lands or waters, (ii) requiring the removal, at the permittee's sole expense, of any non-complying structures and facilities, and (iii) restoring the reservoir or the shoreline to its original condition. Enforcement is discussed in more detail in Section XIV of this Policy.

Under its permitting programs, Cube Yadkin conditionally permits adjoining property owners with eligible lots to access and use Project lands and waters. Adjoining property owners must comply with all permits, this Policy, the Specifications for Private Recreation Facilities at High Rock and Narrows Reservoirs (Specifications for Private Recreation Facilities), the Subdivision Access Approval, Multi-use Facility Permitting, and Industrial Approval Procedures (Multi-use Procedures) and Cube Yadkin's other applicable procedures and requirements. Failure to do so is subject to enforcement as discussed in more detail in Section XIV.

Cube Yadkin has endeavored to make this Policy clear and useable for adjoining property owners. However, from time to time there may be questions regarding interpretation of this Policy or matters not specifically addressed by this Policy. These will be resolved by Cube Yadkin giving due consideration to the underlying goals reflected in this Policy and the Yadkin Project Shoreline Management Plan (SMP).

II. General Stewardship Provisions

- A. Cube Yadkin's highest priority under this Policy is to preserve the natural character of the shoreline. In certain circumstances described below, Cube Yadkin will permit modifications to the shoreline. Even where permitted by Cube Yadkin, Cube Yadkin expects alterations to the shoreline to be minimized, and if such alteration will result in adverse impacts to

Yadkin Project Shoreline Stewardship Policy

reservoir or shoreline resources or Project operations, these impacts must be adequately mitigated. Cube Yadkin encourages adjoining property owners to prepare plans for proposed development of houses, piers, yards, pathways, and other facilities that utilize natural materials and preserve the natural shoreline setting.

- B. Cube Yadkin considers installation of any permitted facilities or structures within the Project boundary to be temporary. Accordingly, Cube Yadkin requires that all facilities, including piers, pathways, stairs, ramps, and retaining walls, be constructed of such materials and in such a manner that allow easy removal and restoration of the natural shoreline. Generally, wood and uncemented rock, stone, and paving block are the preferred materials. Concrete, and masonry are not allowed. Other materials may be considered on a case-by-case basis.
- C. Cube Yadkin prohibits the operation of any equipment (vehicles, backhoes, bulldozers, skidders, tractors, all-terrain vehicles, etc.) within the Project boundary except by written permit.

III. 100-foot Forested Setback Requirement

A. Specifications

For all lots in subdivisions platted and recorded on or after July 1, 1999, as a condition of eligibility for private individual piers, shared piers, or use of, or private access to the Project lands and waters, Cube Yadkin requires satisfaction of the following minimum specifications for a 100-foot forested setback:

- 1. All structures (including but not limited to buildings, houses, driveways, roof overhangs, decks, porches, patios, cantilevered decks, stairs, posts, columns, fences, retaining walls, landscaping walls, and gazebos), unless otherwise allowed in III.A.2 and III.A.3, must be set back at least 100 feet from the reservoir shoreline. The setback will be maintained as a forested area. The 100-foot forested setback will be measured along the ground surface from the normal full-pool elevation of the reservoir to the nearest structure(s) (see Figure 1).

Figure 1 - 100-foot Forested Setback

100-foot Forested Setback — All structures (including but not limited to buildings, houses, driveways, roof overhangs, decks, porches, patios, cantilevered decks, stairs, posts, columns, fences, retaining walls, landscaping walls, and gazebos), unless otherwise allowed in III.A.2 or III.A.3, must be set back at least 100 feet from the reservoir shoreline. A septic field or well, however, will be allowed in the 100-foot forested setback to the extent that installation does not require removal of any vegetation other than as permitted in Section III.A.6. In addition, the 100-foot forested setback requirement does not apply to a pathway to a pier, an irrigation system, etc. The 100-foot forested setback will be measured along the ground surface from the normal full-pool elevation of the reservoir to the nearest structure(s).

20-foot Construction Zone — A 20-foot-wide construction zone may intrude into the 100-foot forested setback to accommodate construction. Vegetation may be removed in the construction zone, but that portion of the construction zone intruding into the setback must be revegetated upon completion of the construction.

Vegetation Removal — Vegetation removal on the adjoining property owner's property is allowed within the 100-foot forested setback in accordance with Section III.A.6.

2. A septic field or well is allowed in the 100-foot forested setback to the extent that installation does not require removal of any vegetation other than as permitted in Section III.A.6. In addition, the 100-foot forested setback requirement does not apply to a pathway to a pier, an irrigation system, etc.
3. A sitting area is allowed within the 100-foot setback. The sitting area must be at ground level, must not exceed 200 square feet, and must have a pervious surface (e.g., grass, pressure-treated wood, gravel, or uncemented brick, rock, stone, or paving blocks).
4. Access pathways are allowed in the 100-foot forested setback so if they comply with the requirements outlined in Sections V.A.2 and V.A.3 of this Policy.

Yadkin Project Shoreline Stewardship Policy

5. Variances will only be considered when a lot is unbuildable. Unbuildable means the inability to build the minimum size house required by the subdivision's restrictive covenants, or an 1,800 square foot home, if no minimum house size is specified, behind the 100-foot forested setback.

In instances where the 100-foot forested setback requirement would render a lot unbuildable, Cube Yadkin may, on a lot-by-lot basis, consider pier eligibility with a lesser setback that would provide the maximum possible setback, which in no case will be less than 50 feet. For lots where Cube Yadkin agrees to a setback of less than 100 feet, Cube Yadkin must also concur with an appropriate construction zone for that lot.

6. To maintain private pier eligibility, vegetation in the 100-foot forested setback must be maintained as it existed prior to development.
 - i. Fallen trees (blow-down), fallen limbs, and fallen branches may be removed, but all leaf litter (leaves, pine needles, etc.) must remain.
 - ii. No lap trees, trees, or vegetation of any type overhanging the reservoirs or within the reservoirs may be removed without specific permission from Cube Yadkin.
 - iii. Any tree that poses an imminent threat to life or property may be removed.
 - iv. Within 30 feet of tributaries, ditches, swales, or drainageways that drain into the reservoir, no living vegetation, or dead vegetation root structure may be removed.

To provide opportunity for improved water views, adjoining property owners may remove one hundred percent (100%) of trees less than two inches in diameter (measured one foot above ground level). Fifty percent (50%) of other vegetation less than 5 feet in height may be removed. In addition to the above, living limbs may be removed up as much as fifty percent (50%) of the height of the tree as necessary (dead limbs of any height may be removed on trees). If the above measures do not provide satisfactory views of the reservoir, the property owner may remove, with Cube Yadkin's agreement, additional trees up to six inches in diameter within a 30-ft wide corridor. The adjoining property owner may be asked to re-vegetate the view corridor with low-growing native species to minimize overland erosion.

7. In a permit to construct a private individual or shared pier (see the Specifications for Private Recreation Facilities), Cube Yadkin may allow movement or removal of identified lap trees where necessary for construction or installation of the facilities. Lap trees are defined as trees, living or dead, overhanging or hanging into the water. In cases where movement or removal is necessary, Cube Yadkin will require replacement of the lap trees along the same stretch of shoreline at a 2:1 replacement to removal ratio.
8. For any lot in a subdivision subject to the 100-foot forested setback requirement set forth above, the primary sanction for failure to maintain the forested setback as described, is a loss of eligibility for: (i) a private (individual or shared) permit within the Project boundary (i.e., on a reservoir); and (ii) use of, or private access to the Project lands and waters. Once an adjoining property owner in a subdivision to which these setback requirements apply has a permitted private pier, subsequent removal of vegetation from the 100-foot forested

setback, other than as allowed under the above criteria, is also subject to enforcement as set forth in Section XIV.

9. In no case may management of the 100-foot forested setback be inconsistent with the requirements of North Carolina's watershed protection rules and county watershed protection ordinances.

B. Application to Subdivisions on Narrows Reservoir

Lots in certain subdivisions on Narrows Reservoir, including lots in the Uwharrie Point and Heron Bay subdivisions, are already subject to a 100-foot setback requirement and tree removal restrictions (known as the "6-inch rule") established to protect Bald Eagle habitat. Specifically, the 6-inch rule includes the following:

- All buildings must be set back 100 feet from the water's edge, except a septic field or well will be allowed in the 100-foot setback to the extent installation does not require removal of any 6-inch or greater diameter tree. The diameter of the tree will be measured 1 foot above ground level.
- A 20-foot construction zone around a dwelling will be permitted to intrude into the 100-foot setback. The portion of the construction zone intruding into the setback must be revegetated upon completion of construction.
- Building is interpreted to be a verb and includes, but is not limited to, the footprint of the house, roof overhangs, decks, porches, patios, cantilevered decks, stairs, posts, columns, fences, retaining walls, landscaping walls, and gazebos.
- Variances will be granted only when a lot is unbuildable. Unbuildable means the inability to build the minimum size house, as required in the development's restrictive covenants, behind the 100-foot setback.

The 100-foot setback will be measured along the ground surface from the normal full pool-elevation of the reservoir to the nearest building.

For lots in subdivisions on Narrows Reservoir platted and recorded on or after July 1, 1999, the provisions of Section III.A of this Policy apply. For lots in earlier subdivisions, the 6-inch rule continues to apply. However, the adjoining property owner may request from Cube Yadkin, on a lot-by-lot basis, approval for an alternative form of vegetation management consistent with Section III.A.6. In these cases, where vegetation has been removed in accordance with the 6-inch rule, the adjoining property owner should expect that some vegetation replanting will be required within the setback as a condition of continued pier permit eligibility.

IV. Activity Permits

Cube Yadkin may authorize certain other activities within the Project boundary by issuing a written construction or activity permit. Other than public recreational use of the Project reservoirs through public access areas, any non-Project uses or activities on Project lands or waters, or any private use of or access of Project waters and lands, requires a written permit from Cube Yadkin, and may not commence until the permit is issued. Some of the activities for which adjoining property owners most often request a permit are summarized below and discussed in more detail later in this Policy. Cube Yadkin reserves the right to refuse to grant an activity permit in the event the adjoining property owner has not complied with this Policy. Permit applications may be obtained on Cube Yadkin's website at <http://cubecarolinas.com/shoreline-management/> or by contacting Cube Yadkin at:

Cube Yadkin Generation LLC
P.O. Box 575
Badin, North Carolina 28009
(704) 422-5555
chc@cubecarolinas.com

If a construction or activity permit is issued, all work must be done in compliance with the terms of the permit, this Policy, and other applicable Cube Yadkin policies, procedures, and requirements. The applicant is responsible for correcting or removing any unauthorized activity or structures. Permits are of limited duration and are terminable by Cube Yadkin in accordance with their terms. Changing conditions or other factors may lead Cube Yadkin to refuse to renew an activity permit or to terminate an activity permit.

The following activities always require a written permit from Cube Yadkin:

- Construction — construction or modification (modifications include any changes to the footprint [horizontal or vertical], layout, design, or construction material of the structure) of any structures, roads, or access pathways within the Project boundary.
- Shoreline Stabilization — construction, installation, or modification of riprap, retaining walls, or other forms of shoreline stabilization measures, including shoreline plantings.
- Shoreline Alteration (Excavation) — removal or alteration of any natural features within the Project boundary, including sediment, soil and rock.
- Vegetation Removal — removal of any vegetation, living or dead, within the Project boundary.
- Shoreline Clean-up and Lap Tree Removal or Relocation — removal of dead or fallen trees, lap trees (trees, living or dead, overhanging or hanging into the water), or other woody or natural debris that exists within the Project boundary.
- Private Irrigation Systems — installation of new systems or transfer of existing irrigation systems.
- Vegetative Plantings — planting of any vegetation, including but not limited to shrubs, hedges, flowering plants, native vegetation, etc., within the Project boundary.

Removal of floating debris and shoreline litter such as floating logs, paper, plastic, and other unnatural forms of garbage or debris, and the removal of trees or driftwood that poses an imminent threat to life or property do not require Cube Yadkin approval if the method of removal complies with the other requirements of this Policy.

V. Construction Activities

A. Access Pathways

1. The construction of a pathway to the reservoir shoreline is allowed within the 100-foot setback. Pathways should be constructed to minimize the number of trees and the amount of vegetation to be removed. Pathways must also meet the following specifications:
 - a. Pathways must be no wider than 6 feet.
 - b. Pathways must be constructed of pressure-treated wood, gravel, or uncemented brick, rock, stone, or paving blocks.
2. Those planning to construct a pathway within the setback must provide Cube Yadkin with the following information:
 - a. A map or sketch of the adjoining property showing the location of the proposed pathway, including the Project boundary and property ownership.
 - b. The location of trees and vegetation to be removed.
 - c. Materials to be used in construction.

B. Structures

1. Construction of private piers and multi-use facilities may be permitted as outlined in the Specifications for Private Recreation Facilities or Multi-use Procedures, respectively. Construction of any other structures within the Project boundary is prohibited.
2. New houses and other buildings on a permanent foundation located in a subdivision platted and recorded on or after July 1, 1999 must comply with the 100-foot forested setback requirement set forth in Section III.A.6.

C. Roads / Boat Launch Ramps

1. Construction of roads of any sort within the Project boundary is prohibited without Cube Yadkin's written permission.
2. Construction of private boat launching facilities is prohibited, except as may be permitted under the Multi-use Procedures.

VI. Shoreline Stabilization Measures

- A. Erosion of the reservoir shoreline is a naturally occurring phenomenon resulting from wave action upon the land. All owners of property adjoining the reservoirs should expect some amount of shoreline erosion over time. Prevention of severe erosion is the responsibility of the owner of the property adjoining the reservoir. To the extent that particular circumstances demonstrate the need for shoreline stabilization, based on the assessment of a registered Professional Engineer, vegetative plantings of native plants are preferred, followed by riprap and, in extreme circumstances, retaining walls. More information about using native plants to reduce erosion and stabilize shorelines can be found at <http://cubecarolinas.com/shoreline-management/>.
- B. No shoreline stabilization measures may be placed within the Project boundary without Cube Yadkin's written permission.
- C. Any adjoining property owner with concerns that the property is subject to severe erosion may contact Cube Yadkin to request a shoreline stabilization application and to initiate the shoreline stabilization evaluation process. The shoreline stabilization evaluation will be conducted by a professional engineering firm of Cube Yadkin's choice. An application fee will be charged for the permit that will reflect the cost of a professional engineering evaluation of the need and appropriate measures for erosion control.
- D. All requests to implement erosion control must meet all applicable zoning and other government regulations and will require written approval from the U.S. Army Corps of Engineers (USACE), and in some instances, the North Carolina Department of Natural and Cultural Resources (NCDNCR) and the North Carolina Wildlife Resources Commission (NCWRC). The applicant will be responsible for any fees or costs associated with securing any necessary approvals.
- E. Issuance of a permit for the installation of any erosion control measure does not give the permittee the right to add or remove shoreline material or change the existing reservoir contour except as specifically stated in the permit. All erosion control structures of any type must follow and may not alter the basic contour of the shoreline.

VII. Shoreline and Reservoir Alteration (Excavation and Dredging)

- A. Alteration of the existing reservoir bottom or shoreline (other than Cube Yadkin-permitted shoreline stabilization measures) such as removal or modification of rocks, soil, sand, and sediment (including dredging and excavation), is generally prohibited on Tuckertown, Narrows, and Falls reservoirs.
- B. On High Rock Reservoir Cube Yadkin may permit excavation of reservoir sediments to maintain or create recreational boat access to private piers. Excavation at High Rock Reservoir is by written permit only in accordance with the following standards:
 - 1. All excavations must have prior written approval from the USACE and the North Carolina Division of Water Resources (NCDWR).

Yadkin Project Shoreline Stewardship Policy

2. Excavation of the reservoir adjacent to shoreline which has been designated as High cultural probability zone in the SMP requires prior written approval from the NCDNCR.
 3. Only excavation (in the dry) is permitted and must be performed when the reservoir is drawn down sufficiently to access the excavation site. No dredging (in the wet) is permitted in conjunction with the construction or maintenance of private piers.
 4. The excavation must not alter the reservoir shoreline at normal full-pool elevation (623.9 feet (USGS datum), 655.0 feet (Yadkin datum) at High Rock).
 5. No excavation is allowed in areas of wetland vegetation.
 6. Excavation may not occur during the months of March–June because of potential impacts to fish spawning.
 7. The shape and depth of the excavation must be such that water will drain freely from the excavation when the reservoir level drops below the level of the excavation.
 8. All excavated material must be placed landward of the normal full-pool elevation (623.9 feet (USGS datum), 655.0 feet (Yadkin datum) at High Rock).
 9. Individuals conducting the excavation are responsible for disposing excavated material in compliance with North Carolina Department of Environmental Quality (NCDEQ) regulations and requirements.
 10. Cube Yadkin reserves the right to require prior testing of sediment in the area to be excavated and reserves the right to deny permission for excavation based on test results.
- C. Anyone seeking permission for excavation must contact Cube Yadkin early in their planning process and submit an application. The following information must be included in the application:
1. A map of the reservoir area where the excavation is proposed.
 2. A description of the planned excavation, including an estimate of the area to be modified and the amount of material proposed to be removed from the reservoir.
 3. A plan for disposal of excavated material.
 4. A brief description of the potential impacts of the proposed excavation activity on surrounding reservoir resources, including impacts to water quality and fish habitat.
 5. Plans and schedule for conducting the proposed excavation.
 6. Written approval from the USACE and NCDWR.
 7. If excavation is planned adjacent to shoreline designated as High cultural probability zone, written approval from the NCDNCR.
- D. Cube Yadkin may permit alteration of the existing reservoir bottom or shoreline or modification of rocks, soil, sand, and sediment (including dredging and excavation) on rare occasions if such modification to the shoreline will enhance habitat for fish or wildlife or if such alterations or modifications are necessary for the maintenance of water intake or discharge systems. Cube Yadkin may also permit such activities to enhance public access or

public recreation opportunities. Cube Yadkin will permit such activities only with the concurrence of the appropriate agencies.

VIII. Vegetation Removal (see Shoreline Cleanup, Section X)

- A. The removal of trees, stumps, brush, or any other form of vegetation, living or dead, within the Project boundary is prohibited without written permission from Cube Yadkin.
- B. For new development in subdivisions platted and recorded on or after July 1, 1999, a 100-foot forested setback must be maintained. To remain eligible for a private recreation facility permit, removal of vegetation within the 100-foot forested setback is limited to that allowed under Section III.A.6.

IX. Aquatic Vegetation

- A. Cube Yadkin prohibits the removal or destruction of aquatic vegetation growing within the Project boundary. Aquatic vegetation provides very important habitat for fish and other aquatic life forms and must not be cut, removed or in any way harmed by adjoining property owners.
- B. Consistent with NCWRC guidance, Cube Yadkin may allow the construction of new private piers in shoreline areas where there is aquatic vegetation present, so long as the pier conforms to the specifications set forth in the construction permit and the adjoining property owner assumes responsibility for the health and viability of the aquatic vegetation. Specific requirements relative to these standards will be contained in an Aquatic Vegetation Agreement (referred to in Section IV of the Specifications for Private Recreation Facilities), which must be signed by the adjoining property owner before a construction permit will be issued.
- C. Cube Yadkin may, from time to time, grant written permission for the removal of certain forms of non-native or nuisance aquatic plants. The permission will only be made with the concurrence of the NCWRC. However, removal of any aquatic vegetation of any type without written permission from Cube Yadkin is not allowed.

X. Shoreline Cleanup and Lap Tree Removal or Relocation (see Vegetation Removal, Section VIII)

- A. The removal of dead trees, stumps, or other woody or natural debris that exists within the Project boundary is prohibited without written permission from Cube Yadkin. Such material provides cover for fish, and its presence greatly enhances fish habitat in the reservoirs. Cube Yadkin may grant a permit for woody debris removal on a case-by-case basis for purposes of safety or recreational access. Anyone requesting approval from Cube Yadkin for shoreline cleanup must obtain a written permit from Cube Yadkin.
- B. Removal or relocation of lap trees may only occur with Cube Yadkin's written permission. To enhance fish cover and habitat, Cube Yadkin provides NCWRC with written permission

to create lap trees, to install living plant material, and create underwater structures intended to improve fish and wildlife habitat in and around the Project reservoirs.

The primary reason for requests to remove or relocate lap trees from or within the Project boundary is typically for accommodating construction of a new private pier. Cube Yadkin attempts to locate the pier and associated access path where there are natural openings along the shoreline to avoid or, if not possible, to minimize, the removal of any vegetation, including lap trees. Issues regarding the removal or relocation of lap trees also arise in the context of evaluating an applicant's proposal for new or modified multi-use facilities. The presence of lap trees is one of the many considerations in determining the type and locations of any facilities that are considered for permitting.

1. In connection with the siting of a new individual or shared pier or in response to a request from an adjoining property owner, Cube Yadkin's goal is to avoid the removal or relocation of any vegetation and therefore, to leave lap trees in place. In those instances where Cube Yadkin allows the removal or relocation of lap trees, relocation is preferred over removal, and if a lap tree is removed mitigation will be required.
 - a. Relocation or Removal Determination – Cube Yadkin will assess whether, in lieu of removal, the lap trees at issue should be relocated to another area along the shoreline within the area defined by extending the adjoining property owner's side lot lines into the reservoir. Relocation of lap trees is preferable to removal. Considerations in this assessment may include the existing lap tree branching structure, density of shoreline cover in close proximity to the site, proximity of adjoining lots, and location and size of proposed or existing recreational facilities and other structures.
 - b. Mitigation Required – If lap trees are relocated rather than removed, no mitigation is required.

If lap trees are removed rather than relocated, mitigation may be required to compensate for the loss of habitat. Typically, Cube Yadkin will allow the adjoining property owner to remove the lap trees and replace them with other (preferably similar in species, size, and branching structure) lap trees at a 2:1 replacement-to-removal ratio using trees that come from an area inland more than 100 feet from normal full pool. For replacement lap trees originating from such an inland area, no other mitigation is required.

- If replacement trees are not available from an inland area of the lot, Cube Yadkin may consider allowing the adjoining property owner to cut dead, dying, or diseased trees within 100 feet from the normal full pool for use as replacement lap trees.

In infrequent instances, for safety or environmental reasons, Cube Yadkin may allow the removal of existing lap trees without requiring the installation of replacement lap trees. To make this determination, Cube Yadkin will assess the surrounding natural and environmental resources, as well as navigational and recreational safety. In these instances, Cube Yadkin will instead require the adjoining property owner to mitigate the removal of the lap trees by planting replacement trees at a 2:1 replacement-to-removal ratio in an inland area preferably within 100 feet from normal full pool.

Yadkin Project Shoreline Stewardship Policy

Replacement trees for on-land planting must be species native to the Project area as defined in Section XV and Table 3 in this Policy and suitable for site-specific growing conditions.

2. Techniques for Adding Lap Trees as Cover – Generally, Cube Yadkin requires that relocated or replacement lap trees be cabled to prevent the lap tree from drifting and/or causing a navigational or safety issue. The method for cabling or securing replacement lap trees will be determined by Cube Yadkin on a case-by-case basis, but generally will involve cabling the lap tree. If the lap tree is cut with a hinge cut (another method of securing a lap tree) and allowed to fall into the reservoir, or if there are existing lap trees naturally attached to the shoreline, these lap trees may not need to be cabled as long as they remain secure.
 3. Alternative Means of Mitigation – As an alternative to lap tree replacements, on-land planting of native species trees, preferably within 100 feet of the shoreline, may be considered at a 2:1 replacement-to-removal ratio for each lap tree permitted to be removed.
- C. Floating debris, litter, and trash (bottles, cans, tires, plastic containers, styrofoam, logs, etc.) can be removed from the reservoir and shoreline at any time, and does not require Cube Yadkin approval as long as the method of removal complies with the other requirements of this Policy.

XI. Private Irrigation Systems

- A. Installation of new private irrigation systems that utilize the Project reservoirs as a water source require a written permit from Cube Yadkin. The following information must be included in the application:
1. A property map showing the location of the irrigation system including the intake pipe and pump, and the location of the area to be served by the irrigation system.
 2. A design drawing of the irrigation system to be installed.
 3. An estimate of the amount of water to be withdrawn from the reservoir for irrigation purposes on a daily, weekly, or monthly basis.
 4. A schedule for installation of the irrigation system.
- B. Cube Yadkin may permit the installation of new private irrigation systems on a case-by-case basis where such systems meet the following criteria:
1. The pumps and machinery for the new irrigation system are either attached to a pier for that lot or are set back at least 100 feet from the normal full-pool shoreline elevation. No pumps or machinery are permitted in the reservoirs.
 2. All electrical lines are in conduit and piping and conduit associated with the irrigation system result in no additional clearing of vegetation within the 100-foot forested setback.
 3. The adjoining property owner has preserved or recreated a forested area between the reservoir shoreline and the lawn, garden, or other area to be irrigated. The width of the

Yadkin Project Shoreline Stewardship Policy

forested area will be 100 feet for lots in new subdivisions platted and recorded on or after July 1, 1999. The width of the required forested area for all other lots will be determined by Cube Yadkin on a case-by-case basis.

4. The system is designed such that it adequately addresses safety and environmental impacts.
- C. Irrigation systems, existing as of July 1, 1999, may remain in place, as the facilities existed on that date together with any subsequent modifications or repairs approved by Cube Yadkin pursuant to a written construction permit, so long as the system is maintained in good repair, until such time that the property is sold or transferred to a new owner. Existing irrigation systems are transferable, so long as (i) the facilities have been maintained in good repair, (ii) the current property owner has complied with the terms of this Policy and all other applicable Cube Yadkin procedures and requirements, and (iii) the new property owner has signed a permit for the irrigation system, in accordance with Cube Yadkin's requirements. Modifications or repairs to existing irrigation systems may require a construction permit; contact Cube Yadkin for guidance.
- D. Transfer of private irrigation systems will be handled as part of a private pier transfer (see the Specifications for Private Recreation Facilities). If there is no pier to transfer, prior to the sale or transfer of adjoining property, the existing property owner (seller) or the seller's agent must contact Cube Yadkin to request an irrigation system transfer. Upon request, Cube Yadkin will arrange a site visit. If (i) the facilities have been maintained in good repair, and (ii) the seller has complied with all applicable Cube Yadkin procedures and requirements, Cube Yadkin will provide the seller or the seller's agent with a form to request transfer of the permit. For the transfer to be effective, the applicable transfer fee must be paid and a new permit must be completed and signed by the new owner at the time of closing. If the irrigation system is deemed not transferable, Cube Yadkin will provide the seller or the seller's agent with a written description of repairs (up to and including replacement of the existing irrigation system with a new system) or other actions that must be undertaken before the irrigation system will be transferable.
- E. Cube Yadkin may require removal of unapproved or non-conforming irrigation systems.
- F. During times of low water or drought conditions, Cube Yadkin may request that operation of all private irrigation systems cease. Failure to comply with such a request may result in termination of the permit and the adjoining property owner, at the owner's sole expense, being required to remove the irrigation system, and other enforcement as described in Section XIV.

XII. Vegetative Plantings

Planting of any vegetation within the Project boundary — including but not limited to shrubs, hedges, flowering plants, native vegetation, etc. — is prohibited without written permission from Cube Yadkin.

XIII. Discharges/Dumping

- A. Cube Yadkin prohibits any discharge or dumping into Project waters of any materials, including but not limited to wastewater from sanitary or storm sewer systems, industrial waste, chemicals, paints, petroleum products, household products, leaves, grass clippings, and household waste. The introduction of these materials to the reservoir system can significantly impact water quality and may be a violation of State and federal law. Cube Yadkin also prohibits the application of pesticides or herbicides within the Project boundary without Cube Yadkin's written permission.
- B. Anyone responsible for discharging or dumping such materials into Project waters is subject to enforcement as provided in Section XIV, and Cube Yadkin also may refer such actions to proper authorities for investigation.

XIV. Enforcement

- A. One of the underlying goals of this Policy is to protect and enhance the natural, environmental, cultural, and scenic resources within the Project boundary. Cube Yadkin's highest priority is to preserve the natural character of the shoreline, and this is reflected in the procedures and requirements of this Policy as well as the Specifications for Private Recreation Facilities and Multi-use Procedures. Cube Yadkin believes that most adjoining property owners appreciate the beauty and importance of a natural shoreline and will comply with this Policy. In those instances where violations of this Policy occur, however, Cube Yadkin will consider those violations as serious matters. Violations of this Policy include: (i) any failure to comply with the provisions of this Policy or other applicable Cube Yadkin procedures or requirements; and (ii) failure to obtain or to comply with written permission from Cube Yadkin, where required, before undertaking construction or other activities.
- B. The primary sanctions for violations of this Policy are loss of eligibility for: (i) a private (individual or shared) or multi-use facility permit within the Project boundary (i.e., on a reservoir); and (ii) use of, or private access to the Project lands and waters. Cube Yadkin will also require corrective action including but not limited to restoration and/or mitigation. Eligibility may be reinstated only where adequate restoration and/or mitigation is undertaken and Cube Yadkin determines that reinstatement of eligibility is otherwise consistent with the underlying objectives reflected in this Policy and the SMP. Cube Yadkin, as it deems appropriate, will consult with State and federal regulatory agencies in determining adequate restoration and/or mitigation measures. Cube Yadkin may also assess a penalty fee to help defray the cost of ensuring restoration within the Project boundary is complete.
- C. In addition, in the event of a violation of this Policy, Cube Yadkin, at its sole option, has the right to: (i) terminate any existing permits, and (ii) erect a barrier along the Project boundary to restrict access to the Project lands and waters; and (iii) require, at the adjoining property owner's sole expense, (a) removal of any structures located within the Project boundary, and (b) restoration and/or mitigation, up to and including restoring Project lands and waters to their original condition. In addition, if the adjoining property owner fails to take the required action after notice from Cube Yadkin, Cube Yadkin will consider any facilities or structures

remaining within the Project boundary as a trespass upon its property, and reserves the right to, at the adjoining property owner’s sole expense, remove the facilities or structures, treat them as its own property without any liability to the adjoining property owner for payment, and perform the required restoration and/or mitigation. Cube Yadkin also may pursue any other rights or remedies, including damages, it may have in any permit, or at law or in equity.

XV. Voluntary Shoreline Stewardship Measures

A summary of voluntary measures that adjoining property owners can take to help protect reservoir water quality is provided in Table 2.

**Table 2
Voluntary Actions Adjoining Property Owners Can
Take to Help Preserve Reservoir Water Quality**

Activity	Action
Property Development	Plan your home site to minimize the opportunity of drainage of water from your house, driveway, or lawn directly into the reservoir.
	Establish a building setback and establish or maintain a natural forested buffer between your lawn and the reservoir shoreline, even where not required for eligibility for a private pier or reservoir access.
	Keep clearing of vegetation and creation of lawns to a minimum.
	Install, or be sure that your builder installs, silt fences and other appropriate forms of erosion and sedimentation control on your property to prevent runoff of sediment into the reservoirs.
	Minimize the size of paved driveways and parking areas on your property.
Yard Care	Avoid or minimize the use of fertilizers.
	Minimize use of herbicides and pesticides on your lawn and in your yard.
	Convert unused portions of lawn into gardens, shrubs, trees, or meadows.
	Plant native species and hardy grasses, which require little or no specialized care (see Table 3).
Boating	Use petroleum products with caution and take steps to prevent them from getting into the water.
	Wash boats away from the water and use biodegradable, non-phosphate detergents.
Household Maintenance	Keep septic systems and drain fields well maintained. Have septic tanks pumped and inspected routinely. Have drain fields inspected, particularly if any odor is observed.
	Wash cars and other vehicles away from the water.
Agricultural Activities	Maintain a forested shoreline buffer.
	Install fencing to keep farm animals out of the reservoirs.

Activity	Action
	Institute best-management practices as recommended by the State and U.S. Department of Agriculture (USDA) for crop and animal production.

A. Preserve and Create Natural Forested Shoreline

A natural forested shoreline is essential to the continued health and beauty of the Project reservoirs. Clearing of native trees and vegetation from around the water’s edge destroys habitat for resident wildlife, is detrimental to water quality, and speeds shoreline erosion. By leaving or recreating a natural forested buffer between a house or yard and the reservoir, adjoining property owners can help provide habitat for birds and wildlife, improve water quality, and reduce shoreline erosion. Cube Yadkin recommends that adjoining property owners, even where private pier eligibility or reservoir access are not concerns, consider the following measures on their property to help preserve the shoreline:

- Place buildings and structures at least 100 feet from the shoreline. The further from the shoreline a structure is constructed, the less impact the construction will have on the reservoir and shoreline environment.
- Recreate or maintain a forested buffer of native trees and shrubs between lawn and the shoreline. Generally, the wider the buffer, the more effective it will be in reducing environmental impacts to the reservoir and shoreline. Keep clearing of trees and vegetation from property near the reservoirs to a minimum.
- Use native trees, shrubs, and flowers for landscaping yards and gardens (see Table 3) and <https://content.ces.ncsu.edu/extension-gardener-handbook/12-native-plants>. Native plants provide optimum food and habitat for birds and wildlife. Avoid the use of invasive non-native plants (https://ncwildflower.org/plant_galleries/invasives_list/).

B. Protect and Create Habitat for Fish

To help protect the excellent fishery that currently exists in the Project reservoirs, adjoining property owners are encouraged to take the following actions to help protect, preserve, and recreate important fish habitat.

- Avoid swimming and boating in and around stands of aquatic vegetation. Aquatic vegetation provides premier habitat for fish and other organisms.
- Use downed trees and limbs to create brush piles in the water. Such material provides important cover for fish.

C. Protect Water Quality

The greatest source of pollutants to the Project reservoirs is from nonpoint sources. Nonpoint source pollution is generally created by runoff of water from cleared land into tributary rivers and streams, as well as into the reservoirs themselves. As water runs off cleared land, it picks up sediment and damaging pollutants such as nitrogen, phosphorus, and toxins. As development around the reservoirs increases and more land is cleared, pollutant input from nonpoint sources

will continue to increase and reservoir water quality may be impacted. Cube Yadkin has established policies to reduce runoff and diminish the impacts of nonpoint source pollution on reservoir water quality. Cube Yadkin strongly encourages adjoining property owners to consider the following measures to help reduce the effect of shoreline development on reservoir water quality:

- Establish a building setback and establish or maintain a natural forested buffer between your lawn and the reservoir shoreline, even where not required for eligibility for a private pier or reservoir access.
- Discontinue or minimize the use of fertilizer, herbicides, and pesticides on your lawn, in your house and in your yard. Consider the use of biological controls or try to select products that are labeled as environmentally friendly.
- Keep mowing of lawns to a minimum, or raise the blade height on your lawn mower.
- Use petroleum products with caution and take steps to prevent them from getting into the water.
- Keep septic systems and leach fields in good working order and adhere to established county requirements for the location, design, and operation of septic systems.
- When doing construction or earthwork, install silt fences and other appropriate forms of sedimentation and erosion control on your property to prevent erosion and runoff into the reservoir or tributary streams.

Cube Yadkin prohibits any discharge or dumping of any materials into the reservoirs. Do not discard paints, cleaners, solvents or other household materials directly into the water. Cube Yadkin also prohibits the spraying of insecticides or herbicides directly into the reservoirs, except as described in Section IX.C.

Table 3: Native Trees and Plants Recommended for Use by Adjoining Property Owners in Landscaping and in Establishing a Forested Reservoir Shoreline

	Species Name	Height	Characteristics/Benefits
Large Deciduous Trees	Red Maple <i>Acer rubrum</i>	75'	fast growing; early red blossom; globular; prefers wet but tolerates dry soil
	Sugar Maple <i>Acer saccharum</i>	75'	oval; beautiful fall color; prefers sandy, loam soil; needs sun
	River Birch <i>Betula nigra</i>	50-75'	fast growing; prefers moist locations; attractive bark; needs sun; wildlife value
	Shagbark Hickory <i>Carya ovata</i>	60-80'	oval; narrow habit; nuts; wildlife value; needs deep rich soil and sun
	Mockernut Hickory <i>Carya tomentosa</i>	75-100'	attractive ascending branches; yellow fall color; drought tolerant; wildlife value
	American Beech <i>Fagus grandifolia</i>	80'	large trunk with wide spreading branches; slow growing; prefers well-drained soil; wildlife value
	Red or Green Ash <i>Fraxinus pennsylvanica</i>	60'	fast growing; oval; prefers rich, well-drained soil

Yadkin Project Shoreline Stewardship Policy

	Species Name	Height	Characteristics/Benefits
	American Ash <i>Fraxinus americanus</i>	70-90'	fast growing; wildlife value; prefers well-drained loamy soils; late summer-fall fruit
	Honey Locust <i>Gleditsia triacanthos</i>	80'	fast growing; globular; fine foliage; tolerates any soil type
	Sweet Gum <i>Liquidamber styraciflua</i>	50'	rapid growth; pyramidal; pretty fall color; unusual leaf; likes well drained, wet soil and sun.
	Tulip Poplar <i>Liriodendron tulipifera</i>	80-120'	rapid growth; pyramidal; tulip like flower in May-June; prefers deep, rich soil and sun
	Blackgum, Tupelo <i>Nyssa sylvatica</i>	75'	horizontal branches; wildlife value; brilliant fall color; tolerates moist soil
	Sourwood, Sorrel <i>Oxydendron arboreum</i>	40-60'	pyramidal; flower tassels in July, glossy foliage; striking fall color
	Sycamore <i>Platanus occidentalis</i>	120'	oval; attractive white bark; attracts insects for birds; wildlife value; grows well on shoreline banks; needs sun
	Black Cherry <i>Prunus serotina</i>	55'	abundant fruit; wildlife value; white fragrant flowers
	White Oak <i>Quercus alba</i>	60-90'	largest of oaks; round-headed; wildlife value; tolerates a range of soils
	Black Oak <i>Quercus velutina</i>	75-100'	large ovoid oak; drought tolerant; shade tolerant; wildlife value
	Southern Red Oak <i>Quercus falcata</i>	60-80'	ovoid; drought tolerant; wildlife value
	Red Oak <i>Quercus rubra</i>	75-100'	large rounded oak; tolerates a wide range of soils; wildlife value
	Post Oak <i>Quercus stellata</i>	35-50'	spreading branches; globular; prefers sun and dry soils; wildlife value
	Scarlet Oak <i>Quercus coccinea</i>	60-80'	oval; medium grower; lustrous foliage; brilliant fall color; wildlife value; tolerates dry soil; needs sun
	Willow Oak <i>Quercus phellos</i>	50'	pyramidal; fast growing; fine textured foliage; tolerates wet/dry soil
Small Deciduous Trees	Shad Blow, Serviceberry <i>Amelanchier arborea</i> <i>or canadensis</i>	20-30'	oval; light grey bark; attractive white blossoms in early spring; red fruit in summer; wildlife value
	Ironwood <i>Carpinus caroliniana</i>	30'	oval; smooth grey bark; zig-zag branches; wing fruit; wildlife value; tolerates moist or dry soil; some sun
	Persimmon <i>Diospyros virginiana</i>	40-60'	oval; small canopy; picturesque contorted branches; fall yellow fruits; wildlife value
	Washington Hawthorn <i>Crataegus phaenopyrum</i>	30'	oval; brilliant fall color; June flower; bright red berry in fall/winter; wildlife value; tolerates poor soil, light shade
	Hackberry <i>Celtis occidentalis</i>	30-40'	round; rapid grower, corky knobs on bark; wildlife value; tolerates moist or dry soils
	Redbud <i>Cercis canadensis</i>	40'	globular; beautiful pink-purple flower clusters in April; heart shaped leaf; prefers deep, moist soil; tolerates light shade
	Fringetree <i>Chionanthus virginicus</i>	30'	pyramidal; slow growing fragrant June flower; wildlife value; needs deep, moist soil; tolerates light shade

Yadkin Project Shoreline Stewardship Policy

	Species Name	Height	Characteristics/Benefits
	Flowering Dogwood <i>Cornus florida</i>	30'	oval; beautiful white flowers in April/May; small red fruits; wildlife value; needs well-drained, acid soil; tolerates some shade
	Cockspur Hawthorn <i>Crataegus crus-galli</i>	30'	glossy foliage; dense habit; persistent red fruit; wildlife value; tolerates poor soil, some shade
Evergreen Trees	American Holly <i>Ilex opaca</i>	45'	red berry; wildlife value; needs moist, acid soil
	Loblolly Pine <i>Pinus taeda</i>	20-60'	pioneer species; wildlife value; tolerates sandy soils; needles in bundles
	Virginia Pine <i>Pinus virginiana</i>	20-60'	pioneer species; tolerates poor soils; wildlife value
	Shortleaf Pine <i>Pinus echinata</i>	30-60'	columnar; tolerates poor soils, prefers sun; wildlife value
	Eastern Red Cedar <i>Juniperus virginiana</i>	80'	pyramidal; wildlife value; thick branches, dense foliage; tolerates poor soils
Evergreen Shrubs	Juniper <i>Juniperus communis</i>	2-30'	oval; bluish gray; tolerates dry, poor soil
	Mountain Laurel <i>Kalmia latifolia</i>	5-30'	whorled leaves; flowers May/June; prefers deep, moist, acid soil; tolerates light sun
	Bayberry <i>Myrica heterophylla</i>	4-8'	persistent leaves; aromatic; wildlife value; tolerates dry, sandy soils
	Wax Myrtle <i>Myrica cerifera</i>	25-30'	persistent leaves; wildlife value; grayish, waxy fruit; inconspicuous flowers
	Rhododendron <i>Rhododendron catawbiense</i>	12-15'	majestic bell-shaped purple flowers (also cultivated varieties in other colors); tolerates poor soil, acid loving
	Great Laurel, Rosebay <i>Rhododendron maximum</i>	15-25'	June flower; large waxy leaves; needs acid, moist soil
Deciduous Shrubs	Common Alder <i>Alnus serulata</i>	12-20'	oval; purple catkins spring; prefers sun and moist soils; flood tolerant; wildlife value
	Red Chokeberry <i>Aronia arbutifolia</i>	9'	flowers May-June; smooth pale leaves; red berry; wildlife value; tolerates wet acid or dry soil
	Black Chokeberry <i>Aronia melanocarpa</i>	3-6'	oval, black berry; wildlife value; tolerates wet acid or dry soil
	New Jersey Tea <i>Ceanothus americana</i>	1-3'	globular or mounded; dense red stems; tolerant of poor soils; wildlife value
	Sweet Pepperbush <i>Clethra alnifolia</i>	6'	oval; fragrant summer flower; persistent brown seed; wildlife value; tolerates acid wet or dry soil and some shade
	Sweetbay Magnolia <i>Magnolia virginiana</i>	12-20'	oval; aromatic foliage; large white flowers; wet to moist soils; acid loving
	Red Osier Dogwood <i>Cornus stolonifera</i>	6-12'	globular or mounded; upright spreading red-purple stems; flood tolerant; wildlife value
	Gray Dogwood <i>Cornus racemosa</i>	8-15'	vase; June clustered flower; gray stalk, white berry; wildlife value; tolerates any soil type
	Strawberry Bush <i>Euonymus americanus</i>	6'	oval; purple-pink fruit capsule; bright fall color; needs moist, deep fertile soil

Yadkin Project Shoreline Stewardship Policy

	Species Name	Height	Characteristics/Benefits
	Witch-alders <i>Fothergilla species</i>	3-6'	oval; brilliant fall color; needs moist, rich soil
	Possumhaw <i>Ilex decidua</i>	12-20'	oval; branching shrub; prefers wet sites; shade tolerant; winter red berries; wildlife value
	Winterberry <i>Ilex verticillata</i>	4-9'	oval; small flower in spring; bright red berry; wildlife value; tolerates any soil and some shade
	Wild Plum <i>Prunus sp.</i>	20-35'	globular, white flowers May; red-purple fruits in fall; prefers sun
	Pink Pinxter Azalea <i>Rhododendron nudiflorum</i>	6'	oval; April-May pink flower; needs moist, acid soil; tolerates light sun
	Clammy Swamp Azalea <i>Rhododendron viscosum</i>	9-15'	oval; needs moist, acid soil; tolerates light sun
	Shining Sumac <i>Rhus copallina</i>	8-30'	globular; lustrous foliage; summer flower; red fruit; wildlife value; tolerates dry, sandy soil; needs sun
	Smooth Sumac <i>Rhus glabra</i>	6-20'	globular; summer flower; red fruit; wildlife value; needs deep, well-drained soil and some shade
	Black Willow <i>Salix nigra</i>	10-30'	upright branching; prefers moist areas flood tolerant; wildlife value
	Elderberry <i>Sambucus canadensis</i>	6-12'	oval; flat flower cluster early summer; wildlife value; needs deep, well-drained soil and sun
	Coralberry Indian Currant <i>Symphoricarpos orbiculatus</i>	3-6'	small pale oval leaves; curving branches; wildlife value; tolerates poor soil and some shade
	Common Deerberry <i>Vaccinium stamineum</i>	6-12'	globular; upright spreading branches; nodding bell flowers May; wildlife value
	Mapleleaf Viburnum <i>Viburnum acerifolium</i>	4'	ovoid; small shrub; maple shaped leaves; shade tolerant; wildlife value
	Black Haw <i>Viburnum prunifolium</i>	10-25'	attractive flower clusters; wildlife value; bluish-black fruit; oval leaf; tolerates range of soils
	Yellow-root <i>Xanthorhiza simplicissima</i>	2'	yellow bark and root; small flower; tolerates any moist or dry soil
Hardy Ground Cover	Lady Fern <i>Athyrium filix-femina</i>	2-3'	Nice texture; tolerates shade and wet soil; not drought tolerant
	Violet Wood Sorrel <i>Oxalis violacea</i>	4-8"	Excellent for rock gardens; tolerates some shade, dry soil and drought
	Grass-leaved Blazing Star <i>Liatrus graminifolia</i>	1-3"	rose-purple flowers in late summer; hairy stem
	Bird-Foot Violet <i>Viola pedata</i>	2-6"	purple flowers; tolerates some shade, dry soil and drought
	Barren Strawberry <i>Waldsteinia fragarioides</i>	4-6"	edging or border planting; tolerates some shade, dry soil and drought
Ornamental Grasses	Switch Grass <i>Panicum virgatum</i>	5'	makes excellent dried flowers, screen; needs sun; tolerates dry soil and drought
Vines	Trumpet Creeper <i>Campis radicans</i>	to 35'	large red-orange trumpet flowers; attracts hummingbirds; needs sun; tolerates poor soils;

Yadkin Project Shoreline Stewardship Policy

	Species Name	Height	Characteristics/Benefits
	Trumpet Honeysuckle <i>Lonicera semervirens</i>	to 20'	yellow-red trumpet flowers, attracts hummingbirds; shade tolerant; semi-evergreen
	Virginia Creeper <i>Parthenocissus quinquefolia</i>	to 35'	bright red fall foliage, blue-black berries, high wildlife value, shade tolerant, fast growth rate, long-lived
	Wild Grape <i>Vitis species</i>	to 35'	blue-black berries, very high wildlife value, shade tolerant, fast growth rate
Flowering Perennials	Butterfly Weed <i>Asclepias tuberosa</i>	2-3'	attracts butterflies; brilliant orange flower; needs sun; tolerates dry soil and drought
	Threadleaf Coreopsis <i>Coreopsis verticillata</i>	1-2'	airy texture; yellow, star-shaped flower; needs sun; tolerates dry soil and drought
	Geum <i>virginianum</i>	2-3'	airy habit; colorful; needs sun; tolerates dry soil and drought
	Blazing Star <i>Liatris scariosa</i>	1-5'	erect, bushy habit; bold color; needs sun; tolerates dry soil and drought
	Wild Sweet William <i>Phlox divaricata</i>	1-2'	small, crowded flowers that bloom all summer; needs sun; tolerates dry soil and drought
	Black-eyed Susan <i>Rudbeckia hirta var. Pulcherrima</i>	1-3'	yellow, daisy-like flower; upright habit; needs sun; tolerates dry soil and drought
	Virginia Spiderwort <i>Tradescantia virginiana</i>	1-2'	handsome blue flowers; low, compact growth; needs sun; tolerates wet soil and drought
	Culver's Root <i>Veronica virginica</i>	3-6'	background planting; upright habit; needs sun; tolerates dry soil and drought
	Wild Bergamot <i>Monarda fistulosa</i>	3'	lilac to purple flowers; prefers dry soils; excellent perennial herb
	Cardinal Flower <i>Lobelia cardinalis</i>	2-3'	bright scarlet flowers; prefers moist soil, partial shade; erect perennial
	Wild Columbine <i>Aquilegia canadensis</i>	1-2'	excellent garden selection; yellow and red flowers; prefers loamy soil, partial shade
	Fire Pink <i>Silene virginica</i>	6-10"	deep crimson petals; prefers well-drained sandy soil; flowers in loose cluster
